

Voice, Video and Data CONSTRUCTION SERVICES

Chickasaw Network Services, LLC (CNS) provides a skilled team of experts specialized in delivering a finished product from source to termination. Whether using your design or ours, we can furnish and install all forms of telecommunication cabling products and equipment for inside building or customer premises to outside plant, including aerial and underground construction.

AERIAL CONSTRUCTION SERVICES

Our team provides aerial telecom installation and maintenance while adhering to local construction codes and permits. CNS provides all applicable documentation, including maps and as-builts, to ensure our customer's communication system has accurate, validated prints for all projects. We are experienced in various strand configurations, and fiber, coax, and twisted pair cabling. Our team of quality control personnel and supervisors ensures operations are within construction guidelines, meeting completion dates, and budgets.

UNDERGROUND CONSTRUCTION SERVICES

With in-depth knowledge of underground construction, the CNS team highly regards the importance of safety and coordination, whether in congested city streets or rural roads. Working closely with municipalities and local residents, our team creates traffic plans and schedules that minimize the interruption of road access. The protection of our employees, our customers, and the public is of utmost importance and is evident throughout every project.

ENGINEERING SERVICES / TURNKEY

Our experienced engineers are well-rounded professionals with backgrounds in communications and civil engineering with practical experience in construction and installation of all types of facilities for a wide array of customers.

Our team provides a full scope of turnkey services, including consulting, concept, route design, permitting, construction, budgeting, splicing, activation, certification, maintenance, and emergency response and restoration. We offer turnkey solutions within many communications system environments.

Additional services include:

- CATV systems power supplies and testing
- All phases of aerial construction
- Trenching
- Directional boring
- Direct buried construction
- Backhoe equipment
- Conduit, inner-duct placement, rod, and rope
- Fiber optic placement, splicing, and testing

In addition to design and construction services, Chickasaw Network Services also offers project management services. Our team ensures that your project is completed successfully and meets your objectives. Our expertise and experience in the telecommunications industry will assure that you gain the maximum cost efficiencies while reducing the possibility of project delays. The CNS team provides strategic planning, maintain continuous communication, and manage resources, in addition to applying our industry-specific expertise.

Our industry experience includes completing engineering and construction of over 5,000 apartment complexes, and over 1 million apartment units, nationwide.

WORKING WITH CNS

When you work with Chickasaw Network Services, not only are you making a decision that ensures the success of your business venture, but you are also working to help preserve an indigenous culture. You are contributing to our mission of providing the resources needed to enhance the lives of the Chickasaw people.

A SINGLE POINT OF CONTACT

With the highly qualified Chickasaw Network Services team, you can strengthen and diversify your supply chain with one contract and one point of contact with a commitment to honesty, integrity, and customer satisfaction. We consistently use small and diversified businesses as our partners to fulfill the mission and increase value for the customer.
